

iTalkie™ client

Enterprise serverless walkie-talkie, phone calling and text messaging

A groundbreaking solution to painlessly add the efficiency of text and voice into your business workflow.

Replace or talk to your walkie-talkies with your mobile device and PCs and add new functionality. Add simple VoIP to call others in your wireless LAN. Just install the application on your PDA or PC and you are ready to broadcast a call. It's that easy!

Instant PTT and VoIP for inside the four walls!

iTalkie™ is a software solution for private and group calls and text messages with presence-driven phone calling. Since it is serverless, it requires zero setup and configuration.

iTalkie™ answers the specific feedback from vertical markets customers that require a quality voice solution which is easily deployable, maintainable and cost effective.

This self-configuring solution is ideal for multi-site organizations with a limited number of terminals per site. It also uniquely suits mesh networks and wherever there can be no single point of failure for voice communications.

iTalkie™ is cross platform, now! You can run it both on PCs as well as mobile computers for communications between mobile users and people at their desk.

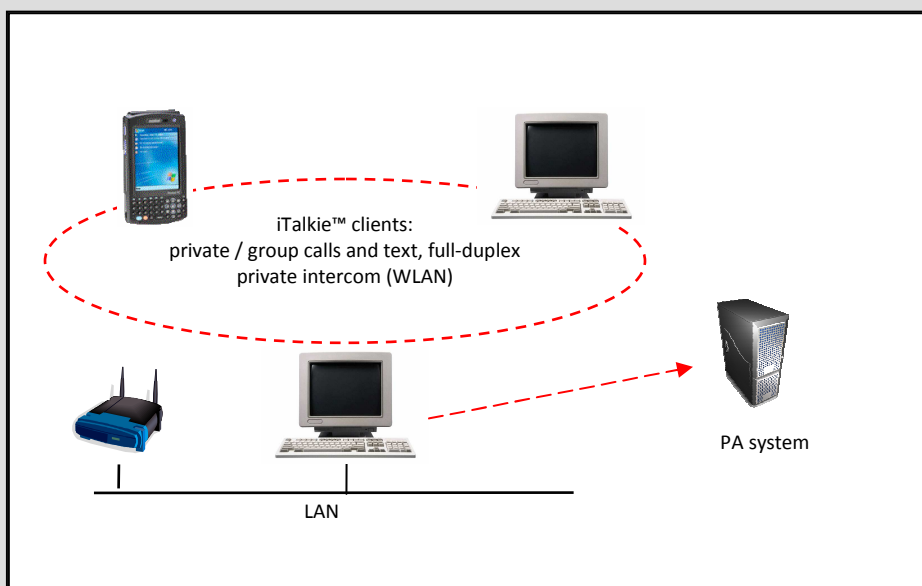

As your voice requirements grow, so will the iTalkie™ solution, by enhancing its capabilities with optional gateways that better fit into your organization's workflow. The iTalkie™/RG radio gateway is one of such drop-in gateway: exchange voice and text messages with your 2-way radios and record all calls and messages. Need integration with your PBX or PA system? We have solutions for them too.

Selected Features

- Cross platform: Windows Mobile, CE and 2000/XP/Vista
- One to many (1:M) and one to one (1:1) half-duplex voice
- One to one (1:1) direct calling (full-duplex, 2-way voice)
