

# iTalkie™/PA: PA system gateway

## IP bridge to overhead Public Announcement systems

### Page from your PC or mobile computer directly to the overhead paging system!

iTalkie™/PA Gateway is a drop-in server to extend the functionality of the iTalkie™ solution.

With the same ease of installation of the iTalkie™ clients, you can install this software, connect the sound output of the system to the analog input of the PA system and in minutes you are all ready to broadcast pages!

It runs on any Microsoft Windows 2000/XP/Vista system. Since it requires minimal storage and processing power, it can be deployed on any type of system such as a POS terminal or a server already dedicated to other functions.

### Instant PTT and VoIP for inside the four walls!

iTalkie™ answers the specific feedback from vertical market customers that require a quality voice solution which is easily deployable, maintainable and cost effective.

iTalkie™ is a software solution for walkie-talkie with presence-driven phone-like calling. Since it is completely serverless, it requires zero setup and configuration.

This P2P self-configuring solution uniquely suits mesh networks and wherever there can be no single point of failure for voice communications.

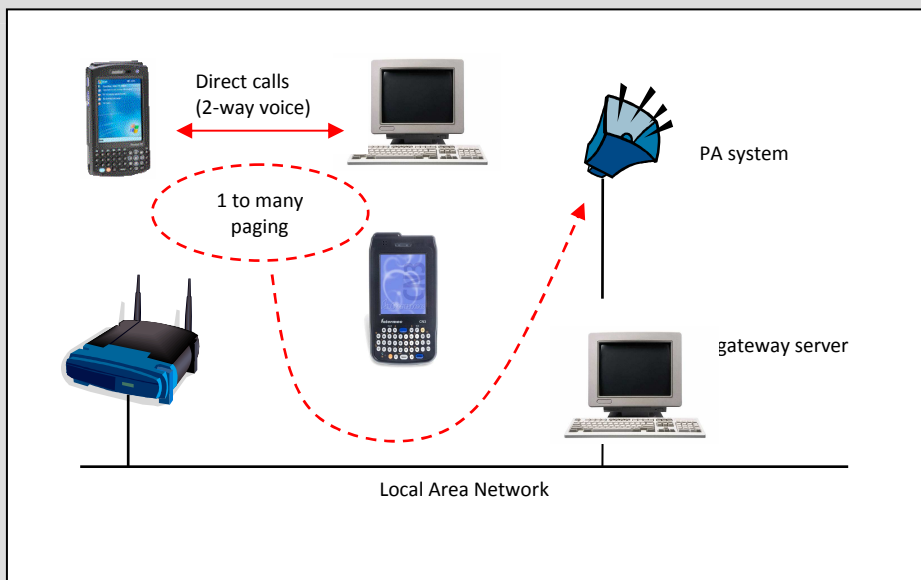

The iTalkie™/PA Gateway shows how easily the iTalkie™ solution expands, by “dropping in” components in the network without the need to reprogram the devices.

### Selected Features

- Immediate setup
- Connect to any existing or new analog PA systems
- Tiny footprint
- Minimal CPU usage
- Runs with any sound card
- Automatically start with OS
- Works on any Windows 2000/XP/Vista system
- Works on any IP network
- Programmable channel and PA identification

### Typical Applications:

- Retail
- Warehousing
- Government
- Hospitality

Eliminate  
the PBX  
cost and  
maintenance

85%  
cheaper than  
individual  
professional  
radios

75%  
lower network  
load than  
traditional  
VoIP
